VIRGO UNITS:

Can be fitted with:

1. A radio module to allow automatic download of data stored within the recorder to be downloaded within the Client's depot using Storm supplied software.

2. A GPRS/GPS module that allows vehicle tracking in real time and/or direct data download access to data stored on the recorder. Tracking and down load is provided direct from the vehicle recorder to any internet connected PC or laptop anywhere in the world covered by the GPRS telephone network.

See Tracking & Data Download section for details
